Deorari AK, et al: Neonatal Transport

Standard Treatment Workflow (STW)

NEONATAL TRANSPORT

INDICATIONS FOR TRANSPORT IN NEONATES

REFERRAL TO HIGHER CENTRE

Any newborn who is assessed by the Health Care Provider as sick and needs referral

NBCC/NBSU TO SNCU
- Birth weight >1500 grams and/or gestational age <34 weeks
- Neonates with:
  - Apnea or gasping
  - Respiratory distress with retractions or grunt, or not maintaining SpO2 with oxygen
  - Persistent Hypothermia or hyperthermia
  - Severe jaundice requiring intensive phototherapy
  - Seizure, apnea, or hypoglycemia
  - Need of positive pressure ventilation >60 seconds at birth
  - Non-passage of stool or urine for more than 24 hours after birth
  - Shock (Coeur peripherique with CRT > 3 seconds, and weak/fast pulse)
  - Refusal to feed, less movement, abnormal movements
  - Significant bleeding

SNCU TO NICU
- Birth weight <1000 grams and/or gestational age <28 weeks
- Neonates with:
  - Respiratory distress requiring mechanical ventilation
  - Unresponsive shock
  - Jaundice requiring exchange transfusion, if facility is not available
  - Refractory seizures
  - Need for surgical intervention
  - Birth asphyxia qualifying for therapeutic hypothermia
  - Multigain failure
  - Refractory hypoglycemia
  - Acute kidney injury needing dialysis

PREPAREDNESS AND PRE-TRANSPORT STABILIZATION

- Identify and communicate with the referral facility
- Check availability of the services and bed in the referral facility (e.g. Ventilator)
- Explain the condition of the patient, need for transport to higher facility, the expected plan and prognosis to the family
- Discuss with parents the possible expenses
- Take informed consent of the parents prior to transport
- Share the contact numbers of both referring and the receiving facility including the concerned doctor

MONITORING DURING TRANSPORT

Parameters to be monitored: Temperature, Heart rate, Respiratory rate, Air entry, SpO2, GI Aspiration, Position of tubes (ET, OG, Cather, ICD, IV cannula), Ventilator/ Continuous positive airway pressure (CPAP) settings

Frequency of monitoring: Every 30 minutes depending on the sickness of the baby

Communication: Parents and the receiving doctor should be informed of any change in the condition of the baby by the transport team

MANAGEMENT DURING TRANSPORT

- Maintain temperature and warmth (incubator / clothing / Kangaroo Mother Care)
- Position, clear the secretion and assess for need of intubation
- Assist with appropriate respiratory support (Oxygen, CPAP, Neonatal ventilation). Stop the vehicle if needed for urgent care, e.g. Intubation
- Manage shock by giving the fluids and inotropes
- Appropriate quantity, frequency and modality of feeding should be followed during transport (preferably breastfeeding or expressed breastmilk)

TRANSFER (HANDING OVER) TO THE RECEIVING CENTER BY TRANSPORT TEAM

Transport team should assist the transfer of the baby to the SNCU/ NICU in the receiving center

Once transferred to the SNCU/ NICU bed, the baby should be stabilized by both the teams

The receiving doctor should have a one to one discussion with the handling over team

The family should be introduced to the new team in person

All the documents viz. discharge summary, investigations, mothers’ samples, list of awaited investigations that will be intimated later etc. should be handed over

ABBREVIATIONS

CFT: Capillary filling time
ET: Endotracheal
ICD: Intracardiac catheter
NBCC: Newborn care center
NBSU: Newborn stabilization unit
NICU: Neonatal Intensive care unit
OG: Orangastic
SNCU: Special Newborn care unit
SpO2: Pulse Oxygen saturation
